Response to Office Action mailed December 1, 2004

Amendments to the Specification:

Please replace the abstract with the following rewritten abstract:

-- The present invention is a container for holding printing fluid material. The

container comprises includes a detector, a memory unit, a communication module, a first electric

power generator, and a second electric power generator. The communication module is

configured to transmit at least one of a result of the detection and the information regarding the

container to the printing device. The first electric power generator is configured to generate a

first electric power by utilizing the radio wave received from the printing device. The second

electric power generator is configured to generate a second electric power from the first electric

power. The second electric power is supplied to both the detector and the memory unit.--
